WATER LINE FLUSHING IN CONNECTION WITH CONSTRUCTION

BURLINGTON, NC— The City of Burlington Engineering Department will be conducting controlled flushing of the water distribution system for the installation of the Hwy 87 water main. The City will make every effort to minimize impacts to customers. Flushing may result in localized cloudiness and discoloration of the water. This condition is temporary and is the result of the scouring action on the water lines. You can quickly clear up the discolored water in your home or business by flushing water through your plumbing. Recommended locations for flushing your plumbing are outside spigots and bathtubs. Residents should not wash clothes in water that is discolored as this could result in stains.

Questions should be directed to the City of Burlington Engineering Department at 336-222-5050.

Dates: February 22, 2016 – February 25, 2016

###

Our Mission:

“The City of Burlington is dedicated to providing high quality municipal services within our diverse community in a friendly, professional and efficient manner in order to promote the safety, health, and quality of life of residents and employees.”
