NOTES:																					
* a numeric 0 is used in lieu of ND to facilitate calculation of averages. J values are considered nondetect																					
* 1,4-Dioxane expressed as ug/L																					
* PFAS compounds expressed as ng/L																					
*Samples analyzed for targeted PFAS by a commercial lab by isotope dilution method																					
*Data provided for informational purposes and not as certified results as there was not an EPA-approved Standard Method for PFAS analysis for wastewater at time of analysis.
